

## Locking Wishes

Discussed at DFUG 2005

1. Many in the group wanted to have the ability to Lock (prevent further changes) by
  - a. Participant ID
  - b. Plate
2. Others asked for quick way to remove all / most DataFax permissions. It was suggested that a "roles" definition/function similar to what was discussed for DataFax 4.0 might assist with this.

### Suggested Solutions

1. "DFfrozen" function in the Edit Check language.

In addition to items mentioned in our discussion, it would be nice if:

1. Studies could be put into read-only status from the DFsystem tool.
2. "Read-only" studies can be identified from the status button in DFsystem. They do not simply appear as "running on server\_name". Better yet, have them shaded in the study list.
